

Product Roadmap · v1.0

Portfolio

AI-native portfolio manager that thinks, acts, and adapts
alongside you.

May 2026 · Private Beta → Public Launch Q3 2026

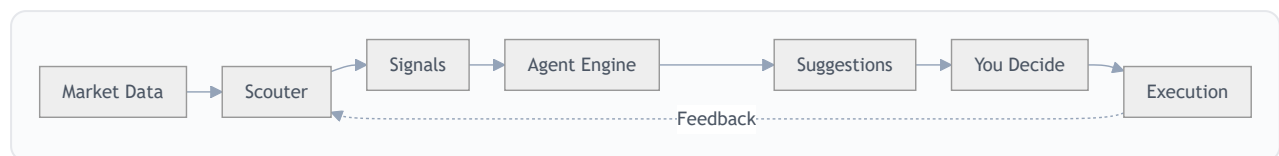

1

Vision & Core Loop

Most traders drown in noise. Multiple exchanges, dozens of positions, endless charts, conflicting signals. **Portfolio** is your autonomous co-pilot: it watches your back, suggests moves before you ask, and executes when you're ready. Not a signal shop. Not a copy-trade platform. An **intelligent agent** that understands your strategy, risk tolerance, and portfolio context — then acts on it.

Long-term vision: An open marketplace where anyone can deploy, share, or sell trading agents built on the Portfolio runtime.

The Core Loop

Scouter

Scans 50+ assets across multiple timeframes. Detects breakout, reversal, and mean-reversion patterns. Emits structured signals with confidence scores.

Agent Engine

Evaluates signals against your portfolio context — positions, risk budget, strategy rules. Decides what matters *right now*. Explains reasoning in plain English.

You Stay in Control

Every suggestion requires approval (configurable auto-pilot for power users). Modify params or reject — the agent learns from your feedback.

Execution

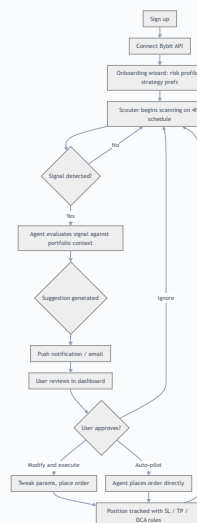

One-click or fully autonomous. Positions managed with trailing stops, DCA rebuys, and take-profit ladders. Tracked until fully closed.

2

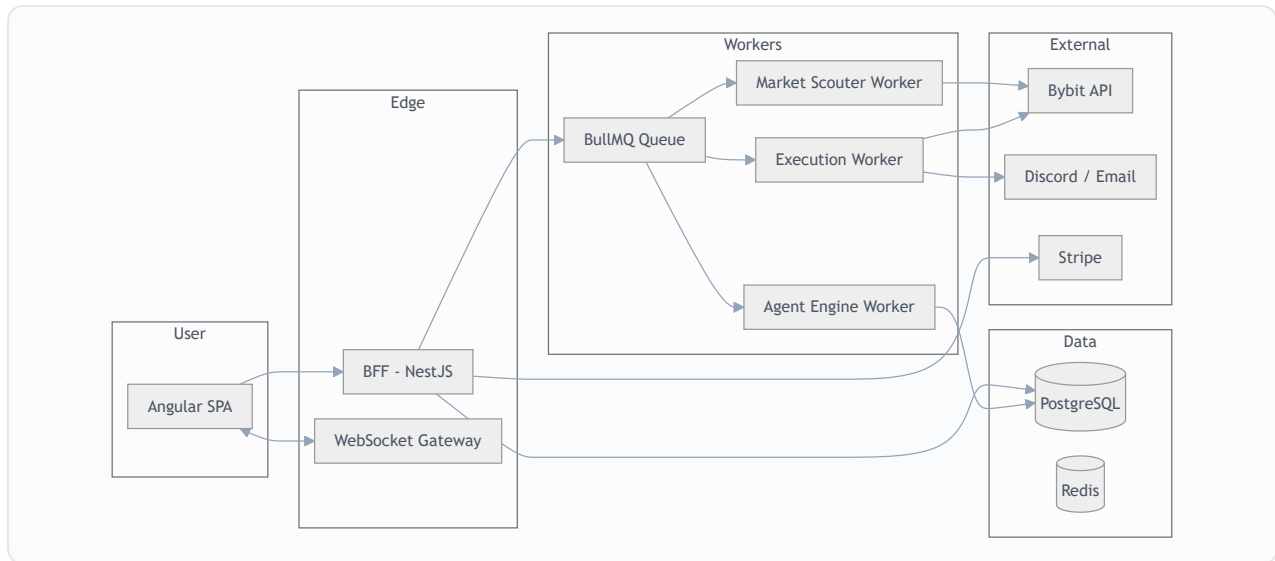

MVP Scope — v1.0

Area	Ships in MVP	Waits for v2
Onboarding	Connect Bybit API key (read + trade)	Binance, OKX, Coinbase
Dashboard	Real-time P&L, position map, risk exposure	Multi-currency, tax lot accounting
Scouter	6 patterns: breakout, pullback, RSI div, volume spike, SMA cross, ATR breakout	Custom indicators, ML signals
Agent	Entry/exit alerts with reasoning	Auto-execution tier
Position Mgmt	Trailing SL, DCA rebuys, TP ladders	Options / derivatives
Risk Engine	Max drawdown, position size %, daily loss limit, correlation guard	VaR, portfolio margin
Auth	Email + Google OAuth, Stripe billing	SSO, team accounts
Analytics	Win rate, Sharpe, max drawdown, avg hold time	Attribution analysis
Notifications	Discord webhook, email	Slack, Telegram, SMS
Infra	Single-tenant dedicated instances	Multi-tenant isolated queues

MVP User Flow

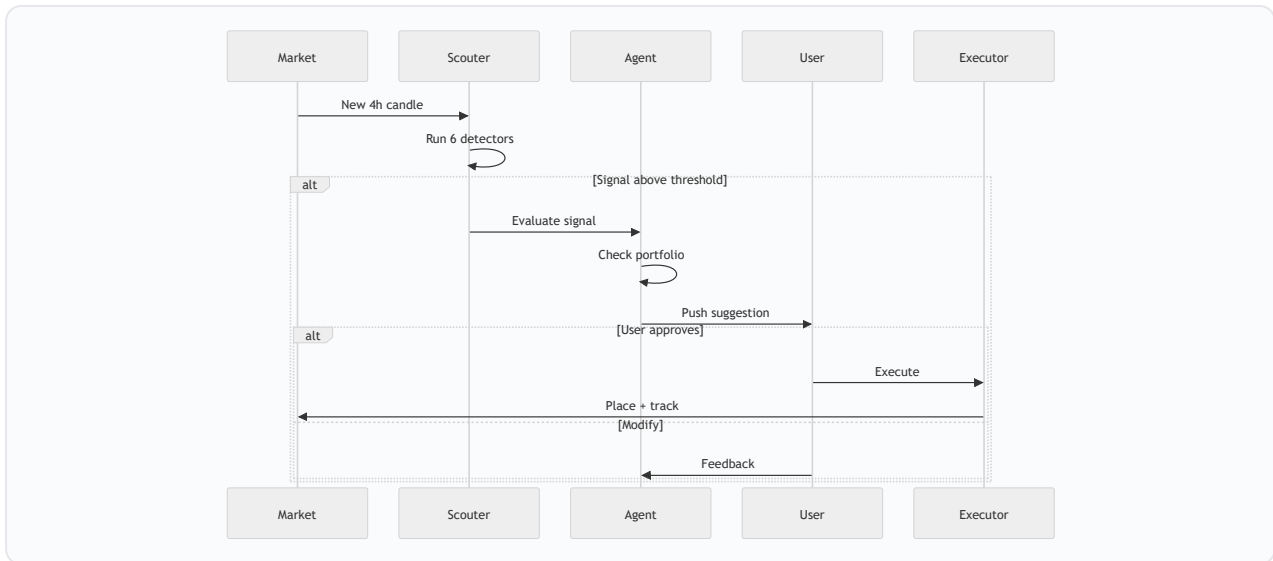

Architecture Overview

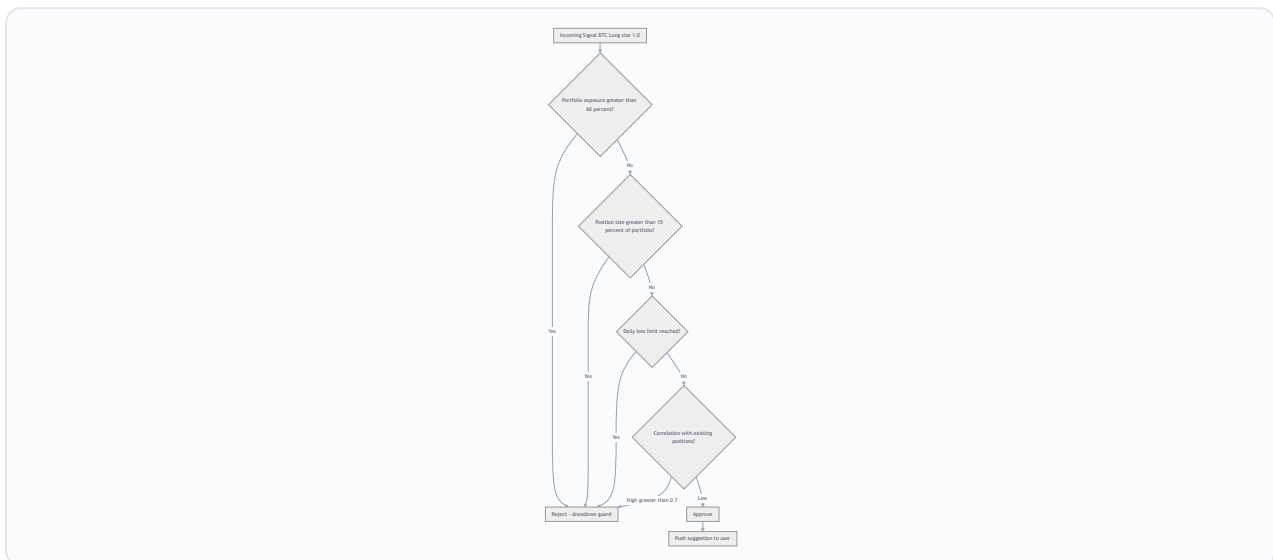

Key Technology Decisions

Decision	Choice	Rationale
Queue	BullMQ (Redis)	Already in stack; cron + event + manual triggers through same pipe
Scouter schedule	4h cadence	Freshness vs. API rate limits; configurable per asset
Database	PostgreSQL	Reliable, good JSON support for signal and position blobs
Auth	Clerk / Auth0	Social login, MFA, webhooks out of the box
Payments	Stripe	Recurring subscriptions, usage metering, customer portal
Deployment	Railway / Fly.io	Simple Docker deploys, per-user isolated instances

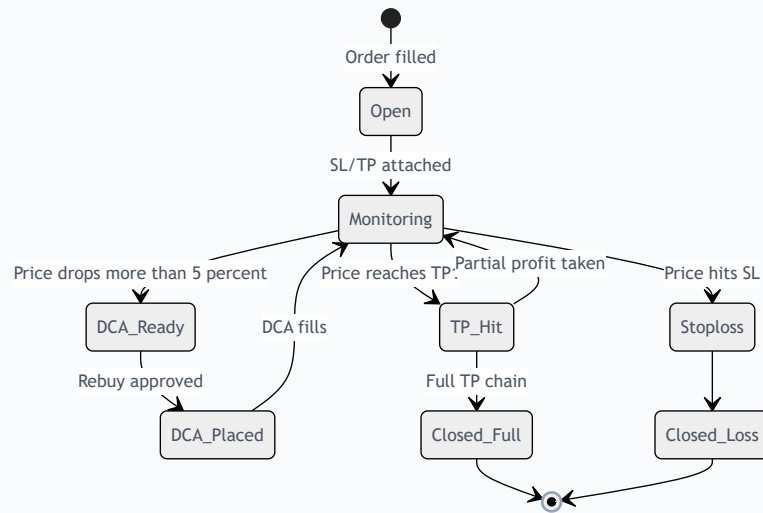

Smart Trading Agent — Signal Lifecycle

Risk Engine — Decision Flow

Position Management Lifecycle

Pricing Model

Free	Starter	Pro	Elite
\$0	\$19 /mo	\$49 /mo	\$149 /mo
Try before you buy	Serious retail trader	Active multi-account	Power trader / small fund
• 1 active signal • Paper trading only • 7-day history • Email notifications	• 5 active signals • Live trading enabled • 30-day history • Discord + email • Basic risk engine	• 25 active signals • Auto-pilot mode • 1-year history • Custom indicator params • Advanced risk engine • Priority support	• Unlimited signals • Multi-exchange • Full history export • DCA auto-pilot • Custom strategy builder • API access • Dedicated instance

Strategy

Tier	Target User	Hook
Free	Anyone curious	See the value before paying
Starter	Retail trader, 1-2 accounts	One good trade covers the month
Pro	Active trader, 3-5 accounts	Auto-pilot is the unlock
Elite	Power trader / small fund	Dedicated infra, unlimited

Annual discount: 2 months free when paid yearly. | **Trial:** 14-day Pro trial on signup.

Future — Agent Marketplace

After the IStrategy plugin interface is hardened, third-party developers can publish agents:

- **Listing:** Developer publishes a strategy (e.g. Momentum Scalper v2)
- **Revenue split:** 70/30 in favor of the developer
- **Pricing models:** One-time, monthly subscription, or 20% of profit
- **Certification:** 90-day paper trading validation before listing

Development Phases

WEEKS 1-4 · FOUNDATION

- Fix monorepo workspace build (contracts package resolution)
- Harden IStrategy plugin interface in packages/contracts
- Extract scouter signal types into contracts
- Set up database schema (users, api_keys, positions, signals, suggestions)
- Deploy BullMQ queues with Redis
- Implement user auth + onboarding flow

WEEKS 5-8 · MVP CORE

- Dashboard UI: portfolio overview, position table, P&L charts
- Scouter: 6 core pattern detectors running on schedule
- Agent Engine: signal scoring + suggestion generation
- Execution: one-click trade placement on Bybit
- Position management: trailing SL, TP ladder, DCA rebuys
- Notification system: Discord + email

WEEKS 9-10 · RISK & TRUST

- Risk engine: drawdown, size caps, daily loss, correlation guard
- Paper trading mode (simulated execution)
- Analytics: performance metrics dashboard
- Audit log: every signal, suggestion, and trade recorded

WEEKS 11-14 · SCALE & GROWTH

- Stripe billing integration + customer portal
- Multi-tier subscription enforcement
- Waitlist to public launch
- Landing page + docs site
- Feedback loop: user ratings on suggestions

Q3-Q4 · MARKETPLACE

- IStrategy plugin registry
- Agent upload, versioning, paper-trading validation
- Leaderboard (verified paper-trading performance)
- Developer revenue dashboard
- Community reviews and ratings

Competitive Landscape

Product	Type	Portfolio Advantage
TradingView	Charting + alerts	We execute, not just alert
3Commas	DCA bots	We explain why, not just what
Cryptohopper	Auto-trading	Risk-aware context engine
CoinLedger	Tax reporting	We manage live positions, not just report
ChatGPT / Claude	Generic LLM	Real-time market + portfolio context

Portfolio's moat is the **agent engine**: it understands *your* portfolio, *your* risk tolerance, and explains suggestions in plain English. It's not a bot — it's a teammate.

Metrics That Matter

Metric	Target (Month 6)
Active users	500
Paying users	100 (20% conversion)
MRR	\$5,000+
Suggestion acceptance rate	Greater than 60%
Avg. portfolio outperformance	+2% vs buy-and-hold
Monthly churn	Less than 5%

Risk and Mitigation

Risk	Mitigation
Bybit API rate limits	Scouter schedule + batching; cache kline data
Users lose money and blame tool	Clear disclaimers, paper trading mode, position size limits
Marketplace quality control	Mandatory 90-day paper trading for certification
Single exchange dependency	Abstract exchange interface from day one
LLM hallucination in suggestions	Rule-based engine for execution; LLM only for explanation layer

Open Questions

- Should free tier include real-time signals or delayed?
- Auto-pilot: full autonomy or per-symbol whitelist?

- Marketplace: open to anyone or invite-only at launch?
- Mobile app or responsive web first?

This is a living document. Updated as we learn from users.
